TOXICOLOGY

Volume contents

Volume 89 (1994)

The nephrotoxicity, cytotoxicity and renal handling of a cisplatin-methionine complex in male Wistar rats **(The nephrotoxicity, cytotoxicity and renal handling of a cisplatin-methionine complex in male wistar rats)**
P.M. Deegan, I.S. Pratt, M.P. Ryan (Nashville, Tennessee; Dublin, Ireland) 1–14

Combined D-penicillamine and prussian blue as antidotal treatment against thallotoxicosis in rats: evaluation of cerebellar lesions **(Combined antidotal treatment reduced the number of damaged Purkinje cells and increased survival)**
R. Barroso-Moguel, J. Villeda-Hernández, M. Méndez-Armenta, C. Ríos, A. Monroy-Noyola (Mèxico, Mèxico) 15–24

Prooxidant and antioxidant properties of iron-hydroquinone and iron-1,2,4-benzenetriol complex. Implications for benzene toxicity **(A postulated iron-polyphenal chelate facilitates DNA cleavage in the presence of bleomycin)**
V. Singh, S. Ahmad, G.S. Rao (Lucknow, India) 25–33

Glutathione-*S*-transferase is a target for covalent modification by a halothane reactive intermediate in the guinea pig liver **(Results of an in vivo inhalation study are presented)**
A.P. Brown, A. Jay Gandolfi (Tucson, AZ) 35–47

2,3,7,8-Tetrachlorodibenzo-*p*-dioxin reduces the number, size, and organelle content of Leydig cells in adult rat testes **(A tentative explanation for the reduction of testosterone production observed in TCDD exposed rats)**
L. Johnson, C.E. Wilker, S.H. Safe, B. Scott, D.D. Dean, P.H. White (College Station, TX) 49–65

Vascular amine oxidase activities during synergistic vasculotoxicity **(Measurement of lysine oxidase activity did not show a synergistic interaction between allylamine and β-aminopropionitrile**
M.B. Trent, P.J. Boor (Galveston, TX) 67–77

Book Review 79–80

The susceptibility of spontaneously diabetic mice to cadmium-metallothionein nephrotoxicity **(Diabetic mice are more susceptible to CdMT)**
T. Jin, G.F. Nordberg, J. Sehlin, P. Leffler, J. Wu (Umeå, Sweden) 81–90

Effect of chelate treatments on kidney, bone and brain lead levels of lead-intoxicated mice **(Currently available chelating agents are more effective in removing lead from soft tissue than from bone)**
M.M. Jones, M.A. Basinger, G.R. Gale, L.M. Atkins, A.B. Smith, A. Stone (Nashville, TN; Charleston, SC and Little Rock, AR) 91–100

Effect of superoxide dismutase and catalase on the nephrotoxicity induced by subchronical administration of ochratoxin A in rats **(Effect of superoxide dismutase and catalase on the nephrotoxicity induced by subchronical administration of ochratoxin A in rats)**
I. Baudrimont, A.-M. Betbeder, A. Gharbi, A. Pfohl-Leszkowicz, G. Dirheimer, E.E. Creppy (Bordeaux and Strasbourg, France) 101–111

0300-483X/94/$07.00 © 1994 Elsevier Science Ireland Ltd. All rights reserved

Effect of bolesatine, a glycoprotein from *Boletus satanas*, on rat thymus in vivo **(Effect of bolesatine, a glycoprotein from *Boletus satanas*, on rat thymus in vivo)**
R. Ennamany, O. Kretz, A. Badoc, G. Deffieux, E.E. Creppy (Bordeaux, France) 113–118

Effects of menthofuran, a monoterpene furan on rat liver microsomal enzymes, in vivo **(In sublethal doses menthofuran causes liver damage)**
K.M. Madyastha, C.P. Raj (Bangalore, India) 119–125

Cyanide-induced lipid peroxidation in different organs: subcellular distribution and hydroperoxide generation in neuronal cells **(Reactive oxygen species may be important in the pathogenesis of cyanide-induced neurotoxicity)**
B.K. Ardelt, J.L. Borowitz, E.U. Maduh, S.L. Swain, G.E. Isom (West Lafayette, IN) 127–137

Long-term effects of Aroclor 1254 (PCBs) on plasma lipid and carnitine concentrations in rhesus monkey **(PCB exposure was associated with increased plasma triglycerides and decreased free and lipoprotein-associated cholesterol and total carnitine)**
F.P. Bell, F. Iverson, D. Arnold, T.J. Vidmar (Kalamazoo, MI and Ontario, Canada) 139–153

Book review 155–156
Announcements 157–160

Special Issue: Effects of Exposure to Nitrogen Dioxide

Toxicity of nitrogen dioxide: an introduction
N.M. Elsayed (Washington, DC; Los Angeles, CA) 161–174

Overview of nitrogen dioxide effects on the lung with emphasis on military relevance **(A review of epidemiology, experimental models, mechanisms, pathophysiology and human toxicity of NO_2)**
M.A. Mayorga (Washington, DC) 175–192

The reaction kinetics of NO_2 · **(Discussion of basic chemical reactions)**
R.E. Huie (Gaithersburg, MD) 193–216

Mechanisms of pulmonary NO_2 absorption **(NO_2 absorption and initial product formation are linked to profile and substrate availability in pulmonary surfactant lining liner)**
E.M. Postlethwait, A. Bidani (Galveston, TX) 217–237

Lung injury following exposure of rats to relatively high mass concentrations of nitrogen dioxide **(Evaluation of dose/time-effect relationships and of possible modifying factors in pulmonary NO_2 toxicity)**
B.E. Lehnert, D.C. Archuleta, T. Ellis, W.S. Session, N.M. Lehnert, L.R. Gurley, D.M. Stavert (Los Alamos, NM) 239–277

Nitrogen dioxide-induced acute lung injury in sheep **(Events observed during the first 24 hours following short exposure (15 to 20 min) to 500 ppm of NO_2)**
A.J. Januszkiewicz, M.A. Mayorga (Washington, DC) 279–300

Human exposure to oxides of nitrogen at ambient and supra-ambient concentrations **(Short-term exposure studies at ambient levels have generally been inconclusive, whereas exposure to high levels may cause severe injury)**
V. Mohsenin (New Haven, CT) 301–312
